David Gardner, D.M.D.

Date.....April 8-9, 2011

Time.....8 a.m.- 5 p.m.

C.E. credit....16 credit hours

Format..... lecture/participation

Tuition \$695

Audience..... dentists

Course Description

Success in implant dentistry has given clinicians the ability to practically meet the needs of those individuals displaying a wide range of conditions. From the replacement of a single missing tooth to the restoration of the entire arch/arches, implants have become the standard of care in treating these individuals.

Whether you are just beginning or already experienced in dental implant treatment, the knowledge and skill you will gain in this intensive two-day course will be a valuable adjunct to your training. The objective is to aid in making implant dentistry as routine as any other restorative procedure in your practice. .

The course will include didactic education, hands-on experience, and laboratory procedures. Participants are encouraged to bring cases, as time will be provided to review options.

Learning Objectives

Upon completion of this program, course participants will be able to:

1. Examine the history of dental implants.
2. Discuss the benefits of implant dentistry.
3. Define osseo-integration.
4. Discuss diagnosis and treatment planning.
5. Define implant overdentures.
6. Discuss implant complete dentures.
7. Discuss implant surgery.
8. Communicate advances in implant surgery.
9. Identify abutments.
10. Analyze specific situations brought forward during case review discussion.
